

# StayInsight AI — Week 4 Submission

Frontend–Backend Integration | Intern Deliverable Guide

## Overview

This document describes exactly what screenshots and evidence to capture for your Week 4 internship submission. Follow each section in order. All screenshots must be taken from a live running instance — no mock data or placeholder content.

## 1. Quick Start — Run the Project

### Step 1a: Install backend dependencies

```
cd StayInsight_AI/backend && npm install
```

### Step 1b: Start the backend (keep this terminal open)

```
npm run dev # Runs on http://localhost:5000
```

### Step 1c: Open a second terminal. Install frontend dependencies

```
cd StayInsight_AI && npm install
```

### Step 1d: Start the frontend (keep this terminal open)

```
npm run dev # Runs on http://localhost:5173
```

### Step 1e: Verify backend health

Open `http://localhost:5000` in browser — you should see the API JSON response

### Step 1f: Verify frontend

Open `http://localhost:5173` — StayInsight home page should load

## 2. Required Screenshots

Capture each screenshot below. Use full browser window. File names are suggestions — match them exactly for easy submission.

| Screen                                | Path                | What to show                                                                                 |
|---------------------------------------|---------------------|----------------------------------------------------------------------------------------------|
| Home Page                             | /                   | Shows Hero section and sample review cards loaded from static data                           |
| Login Page (empty)                    | /login              | Form loaded, no errors shown                                                                 |
| Login – Validation Error              | /login              | Click Sign In with empty fields. Red inline validation messages visible                      |
| Login – API Error (wrong credentials) | /login              | Enter wrong password. Red toast/error: "Invalid email or password."                          |
| Login – Success Toast                 | /login → /dashboard | Enter admin@stayinsight.ai / password123. Green toast: "Welcome back, Admin User!" Dashboard |
| Dashboard – Loaded                    | /dashboard          | 4 stat cards showing live counts. Property Performance bars. Recent Reviews list             |
| Dashboard – Loader                    | /dashboard          | Capture the spinner visible while data is fetching (refresh quickly)                         |

|                          |                           |                                                                                 |
|--------------------------|---------------------------|---------------------------------------------------------------------------------|
| Reviews – Analyse Tab    | /reviews                  | Paste a review text, click Analyse. Result card visible with sentiment badge    |
| Reviews – Browse Tab     | /reviews (Browse All tab) | All reviews from backend loaded as cards with rating and delete button on hover |
| Reviews – Search Results | /reviews (Browse All tab) | Search for "positive" or "clean". Result count shown, filtered cards visible    |
| Reviews – Empty Search   | /reviews                  | Search for a term that returns 0 results. Toast: "No results found for X"       |
| Dark Mode                | any page                  | Toggle dark mode from navbar. Dark background with light text visible           |

### 3. Network Tab Screenshot

Open DevTools (F12) → Network tab. Perform each action below and capture the screenshot showing the XHR/Fetch request and a 200 response in the network panel.

| Ref    | Action    | What to show in Network tab                                          |
|--------|-----------|----------------------------------------------------------------------|
| NET-01 | Login     | POST /api/login with 200 OK response selected, preview showing token |
| NET-02 | Dashboard | GET /api/dashboard with 200 OK, preview showing totalReviews etc.    |
| NET-03 | Reviews   | GET /api/reviews returning array of 5+ items                         |
| NET-04 | Search    | GET /api/reviews/search?q=... with results count visible             |
| NET-05 | Create    | POST /api/reviews with 201 Created after analysing a review          |

### 4. Postman Collection

The file **W4\_APICollection\_W4-INTERN-001.json** is included in this folder. Import it into Postman:

1. Open Postman → click Import (top-left)
2. Drag the JSON file into the import dialog
3. Collection named 'StayInsight AI – Week 4 API Collection' appears in the sidebar
4. Run the Login request first — it auto-saves the token to collection variable {{token}}
5. Run all requests and verify status codes match the saved responses
6. Screenshot: Show Postman with at least 3 successful 200 responses

### 5. Final Submission Checklist

|   | Item                                                         |
|---|--------------------------------------------------------------|
| ✓ | Backend starts with npm run dev (no errors)                  |
| ✓ | Frontend starts with npm run dev (no errors)                 |
| ✓ | Login with admin@stayinsight.ai / password123 succeeds       |
| ✓ | Dashboard fetches real data from GET /api/dashboard          |
| ✓ | Reviews page loads all reviews from GET /api/reviews         |
| ✓ | Search returns filtered results from GET /api/reviews/search |
| ✓ | Analyse Review saves to backend via POST /api/reviews        |

|   |                                                       |
|---|-------------------------------------------------------|
| ✓ | Delete review works via DELETE /api/reviews/:id       |
| ✓ | Loader shown during all fetch operations              |
| ✓ | Toast shown for success, error, and validation events |
| ✓ | No console errors in browser DevTools                 |
| ✓ | No npm build errors                                   |
| ✓ | Postman collection imported and all requests execute  |
| ✓ | All 12 frontend screenshots captured                  |
| ✓ | All 5 network tab screenshots captured                |

### Demo Credentials

| Role   | Email                | Password    |
|--------|----------------------|-------------|
| Admin  | admin@stayinsight.ai | password123 |
| Viewer | demo@stayinsight.ai  | demo1234    |
